

Cloud Cruiser is a cloud software solution architected from the ground up to transform IT data into business meaning, so you can maximize the value of your cloud investments.

Start with our push-button collectors for AWS, Azure, and Google Cloud – enter your credentials and you begin loading data. You can even go back in time and load data that you have collected in the past. Our flexible and powerful data normalization capabilities make it easy to work across platforms, even though the providers will list things in very different ways.
