

We are an Edge Cloud application developer. Our solutions bring to life the content and delivery platform of the future in service provider networks.

The brains behind Qwilt include a talented team of veterans from Cisco and Juniper. We're backed by visionary investors, including Accel, Redpoint, Marker, Bessemer, Cisco and Innovation Endeavors. Together, we recognized the strategic opportunity to develop the service provider edge cloud platform, the future of online content and application delivery.

The Edge Cloud Opportunity – A New Model for Content and Application Delivery in Service Provider Networks

Streaming video growth and online application delivery demands have created one of the most compelling networking technology opportunities ever for mobile and fixed line service providers. Until now, network operators responded to traffic growth with more investment – in routers, switches and links – to build a bigger network. This “brute force” approach to network scaling is no longer viable given today's demand for streaming and tomorrow's forecasted growth. Further, the conventional approach to build network capacity completely misses the strategic opportunity – the Open Edge Cloud.
